

# Dr. Daniel Clark

With nearly 30 years' experience specializing in bulging, herniated, and degenerative disc disease; as well as stenosis and neuropathy, Dr. Daniel Clark's motto is "Experience Counts." A two-time recipient of America's Top Doctor award, presented by the Consumer Research Council of America, Dr. Clark attended college on a full academic scholarship and was a National Honor Society student.

At Macomb Spine Care, Dr. Clark maintains a high level of professionalism and is a leader in spine care, especially for those facing back surgery.

"My goal is to help patients avoid back surgery. There are serious risks from laminectomy and spinal fusion, and I have seen many patients whose surgery failed," says Dr. Clark, whose state-of-the-art facility in Clinton Township is undergoing expansion.

Dr. Clark urges anyone who has surgery scheduled for the back, spine,

or discs to make an appointment with him. "For patients willing to get involved in their care, and willing to work on restoring the body's biomechanics, we have had excellent success in helping patients avoid surgery," says Dr. Clark, who earned his doctorate from Palmer University, the Harvard of chiropractic education.

Macomb Spine Center is an all-encompassing clinic for spine, extremities, sports, and soft-tissue care. For treating low-back pain and injury, Dr. Clark uses an innovative, established, and well-researched approach to nonsurgical care. He knows that many patients are unfamiliar with what options are available when it comes to back pain and disc damage, and he stresses that there are better options than surgery.

Treatment for low-back and neck pain may include: physiotherapy, Cox® flexion-distraction, nonsurgical

spinal decompression therapy, lumbar repetitive motion therapy, cold laser light therapy, deep tissue medical massage, nutritional supplements, a specific low-back exercise program, and foot-leveler stabilizing orthotics. Patients can also benefit from another new and amazing therapy called pulsed electromagnetic field (PEMF), which accelerates nerve regeneration and reduces pain and inflammation.

Many of Dr. Clark's patients have seen other medical professionals before him, so it is very satisfying when he gets a comment like this from a patient: *After years of dealing with chronic migraines, I was more than thrilled to find such amazing help and relief. Dr. Clark truly is a miracle-worker, and I am proud to say that being under his care has helped me regain my normal day-to-day activities. Thank you Dr. Clark and your wonderful staff!*
